Detailed Breakdown of the June 2013 Paper 5 Questions and Answers

Section 1: Energy and Energy Resources

This section tests students' understanding of different energy forms, conservation, and the environmental impact of energy use.

Sample Question 1: Describe how the use of fossil fuels impacts the environment and suggest alternative energy sources.

Model Answer:

Fossil fuels such as coal, oil, and natural gas release greenhouse gases like carbon dioxide when burned, contributing to climate change. They also produce air pollutants that can harm health and ecosystems. Alternatives include renewable energy sources such as wind, solar, hydroelectric, and geothermal power, which produce little or no greenhouse gases and are sustainable in the long term.

Question 2: Calculate the efficiency of a device that uses 500 Joules of energy input and 400 Joules of useful energy output.

Model Answer:

Efficiency $(\eta) = (\text{Useful energy output} / \text{Total energy input}) \times 100$

$$= (400 \text{ J} / 500 \text{ J}) \times 100 = 80\%$$

Therefore, the device has an efficiency of 80%.

Section 2: Electricity and Magnetism

This section focuses on current, voltage, resistance, and magnetic fields.

Sample Question 3: Explain how a magnetic compass works and why it aligns with Earth's magnetic field.

Model Answer:

A magnetic compass contains a small magnetized needle that can freely rotate. It aligns with Earth's magnetic field because the needle experiences a torque due to magnetic forces, aligning itself along the magnetic field lines. This allows navigation based on the direction of Earth's magnetic poles.

Question 4: A circuit has a resistance of 10 ohms and a current of 2 amperes. Calculate the voltage across the resistor.

Model Answer:

Using Ohm's Law: $V = IR$

$$V = 2 \text{ A} \times 10 \text{ } = 20 \text{ V}$$

The voltage across the resistor is 20 volts.

Section 3: Particle Model of Matter

Questions here assess understanding of states of matter, particle behavior, and changes of state.

Sample Question 5: Describe the particle model of a solid and explain why solids have a fixed shape.

Model Answer:

In a solid, particles are tightly packed in a regular arrangement and can only vibrate about fixed positions. This strong intermolecular force maintains a fixed shape because the particles cannot move freely past each other, giving solids their definite shape and volume.

Question 6: A substance melts at 0°C and boils at 100°C. Explain what occurs during melting and boiling processes at the particle level.

Model Answer:

During melting, heat energy increases the particles' kinetic energy, weakening the forces between them until they can move past each other, changing from a solid to a liquid. During boiling, additional heat provides energy for particles to overcome intermolecular forces entirely, allowing them to escape as vapor, transforming from a liquid to a gas.

Section 4: Forces and Motion

This section tests concepts like acceleration, forces, and motion graphs.

Sample Question 7: A car accelerates from 0 to 20 m/s in 5 seconds. Calculate its acceleration.

Model Answer:

Acceleration $(a = \Delta v / t)$

$$a = (20 \text{ m/s} - 0) / 5 \text{ s} = 4 \text{ m/s}^2$$

The car's acceleration is 4 meters per second squared.

Question 8: Draw a velocity-time graph for a vehicle that accelerates for 10 seconds, then moves at a constant speed for 20 seconds, then decelerates to stop in 5 seconds. Describe the graph.

Model Answer:

The graph would have:

- An upward sloping line during acceleration (0 to 10 seconds)
- A horizontal line during constant speed (10 to 30 seconds)
- A downward sloping line during deceleration (30 to 35 seconds)

This visual indicates changes in velocity over time corresponding to acceleration, constant speed, and deceleration phases.

Section 5: Waves and Wave Properties

Questions involve types of waves, wave speed, reflection, and refraction.

Sample Question 9: Explain how ultrasound waves are used in medical imaging.

Model Answer:

Ultrasound waves are high-frequency sound waves that reflect off internal tissues and organs. The echoes are received and processed to produce images, allowing doctors to examine internal structures non-invasively. Ultrasound is safe because it uses non-ionizing radiation.

Question 10: A wave has a frequency of 50 Hz and a wavelength of 5 meters. Calculate its wave speed.

Model Answer:

Wave speed $(v = f \times \lambda)$

$$v = 50 \text{ Hz} \times 5 \text{ m} = 250 \text{ m/s}$$

The wave travels at 250 meters per second.
